## Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

## How to obtain more information

Inquiries about this product and related statistics or services should be directed to: Labour Force Survey Section, Labour Statistics Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone: (613) 951-2793) or to the Statistics Canada Regional Reference Centre in:

|          |                |           |                |

## Ordering/Subscription information

### All prices exclude sales tax

Catalogue no. 71-201-XPB, is published annually as a standard paper product. The price for delivery in Canada is \$114.00. Outside Canada the cost is US \$114.00.

Please order by mail, at Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6; by phone, at (613) 951-7277 or 1 800 700-1033; by fax, at (613) 951-1584 or 1 800 889-9734; or by Internet, at [order@statcan.ca](mailto:order@statcan.ca). For changes of address, please provide both old and new addresses. Statistics Canada products may also be purchased from authorized agents, bookstores and local Statistics Canada offices.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

## Des données sous plusieurs formes

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur Internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolinguage et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet du présent produit ou au sujet de statistiques ou de services connexes doit être adressée à : Section de l'enquête sur la population active, Division de la statistique du travail, Statistique Canada, Ottawa, Ontario, K1A 0T6 (téléphone : (613) 951-2793) ou à l'un des centres de consultation régionaux de Statistique Canada :

|          |                |           |                |

## Note of appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

## Note de reconnaissance

*Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.*

## THIS PUBLICATION WAS PREPARED UNDER THE DIRECTION OF:

Mike Sheridan, Assistant Chief Statistician, Social Institutions and Labour Statistics (613) 951-9480

Deborah Sunter, Director, Labour Statistics Division (613) 951-4740.

### LFS Unit Heads:

- Jean-Marc Lévesque, Analysis (613) 951-2301
- Maureen Whittaker, Data Processing (613) 951-1956
- Royal Gagnéux, Processing (613) 951-4725

with the assistance of the staff members of Labour Force Survey Program.

## OTHER SOURCES OF LABOUR FORCE SURVEY DATA:

### CANSIM

Most of the data published in *Historical Labour Force Statistics* (catalogue 71-201-XPB) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). Users interested in accessing data via CANSIM can visit the following internet address: <http://www.statcan.ca/english/CANSIM> or contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication.

### CD-ROM

A wide variety of data (including those contained in this publication) are available on the *Labour Force Historical Review on CD-ROM* (71F0004XCB). This CD-ROM retails for only \$195.00. To order, CALL 1 800 267-6677, FAX 1 877 287-4369 or MAIL your order to Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, Canada, K1A 0T6. You may also order by E-MAIL at: [order@statcan.ca](mailto:order@statcan.ca) or contact your nearest Statistics Canada Regional Reference Centre: 1 800 263-1136.

### Unpublished data

Additional data are also available on request from the Labour Force Survey Program, on a cost recovery basis. Contact Marc Lévesque for requests or for further information at (613) 951-2793.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

## CETTE PUBLICATION A ÉTÉ PRÉPARÉ SOUS LA DIRECTION DE :

Mike Sheridan, Statisticien en chef adjoint, Statistique sociale des institutions et du travail (613) 951-9480

Deborah Sunter, Directrice, Division de la statistique du travail, (613) 951-4740.

### Les chefs d'unité de l'EPA:

- Jean-Marc Lévesque, Analyse (613) 951-2301
- Maureen Whittaker, Traitement des données (613) 951-1956
- Royal Gagnéux, Traitement (613) 951-4725

avec l'aide du personnel du Programme de l'enquête sur la population active.

## AUTRES SOURCES DE DONNÉES DE L'ENQUÊTE SUR LA POPULATION ACTIVE :

### CANSIM

La plupart des données publiées dans *Statistiques chronologiques sur la population active* (n°71-201-XPB au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM peuvent consulter le site internet à : <http://www.statcan.ca/francais/CANSIM> ou contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone figurent au verso du couvert de cette publication.

### CD-ROM

Un grand éventail de données (incluant celles contenues dans cette publication) sont disponibles sur le *CD-ROM de la Revue chronologique de la population active* (71F0004XCB). Ce CD-ROM se vend à seulement 195 \$. Vous pouvez commander le CD-ROM par TÉLÉPHONE au 1 800 267-6677, par TÉLÉCOPIEUR au 1 877 287-4369 ou par la POSTE à Statistique Canada, Division de la diffusion, Gestion de la circulation, 120 avenue Parkdale, Ottawa (Ontario) K1A 0T6, Canada. Vous pouvez aussi commander par COURRIEL à : [order@statcan.ca](mailto:order@statcan.ca) ou en communiquant avec le Centre de consultation régional de Statistique Canada le plus proche au 1 800 263-1136.

### Données non publiées

Des données additionnelles sont également disponibles sur demande par le biais du Programme de l'Enquête sur la population active, selon le principe de recouvrement des coûts. Veuillez communiquer avec Marc Lévesque au (613) 951-2793 pour toute demande ou pour plus de renseignements.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'«American National Standard for Information Sciences» - «Permanence of Paper for Printed Library Material», ANSI Z39.48 - 1984.

# An overview of the 1999 labour market

The Labour Force Survey (LFS) has undergone extensive revisions to reflect two important changes to the way in which labour market data are produced. As a result, all LFS estimates have been revised back to January 1976. This report uses these revised data. For more information on the revisions to the data, see *Improvements in 2000 to the LFS* at <http://www.statcan.ca/english/concepts/method.htm>.

## Economic conditions

Entering the new millennium, Canadians hoped that the economy would continue its forward momentum, building strength to end the decade on a positive note. Looking back on 1999, they were not disappointed.

The year started much as 1998 finished. The economy remained strong through the first half, as consumers and businesses alike continued to spend. Consumers were interested in big-ticket items like automobiles in the first three months of the year, then turned their attention to

services in the spring. Businesses, whose profits continued to improve, invested in computers and office equipment to make sure their systems were Y2K compliant.

In the third quarter, the US economy helped stimulate robust exports of automotive products, computers and telecommunications equipment. At the same time, personal income continued to grow and pushed up consumer spending at home.

Chart 1

The economy continued to grow at a strong pace in the first three quarters of 1999, driving up employment.

## 1999 – the year of high-tech manufacturing jobs

The appetite from businesses and consumers at home and abroad for Canadian-made products spurred activity in factories across the country. By October, the value of Canadian manufacturing shipments was 8.9% higher than the same month the year before.

This had a rather profound impact on employment in 1999. Led by hiring in the computer and electronic parts sector, the number of manufacturing workers surged ahead by 127,000 or 5.9% in 1999. While gains in 1999 were widespread among other industries as well, the increase in manufacturing jobs led overall employment which increased by 427,000, a gain of 3.0% for the year. This is the third consecutive year of healthy employment gains. By December there were 14.7 million people working in Canada, 61% of the working-age population.

With job gains came a drop in unemployment. By the end of the year, there were an estimated 191,000 fewer jobless people hunting for work, a decline of almost 15%. This drove the unemployment rate down to 6.8% in December, a decline of 1.3 percentage points from a year earlier. This was the lowest the rate has been since April 1976.

## Job growth better than predicted, faster than in the United States

The drop in the unemployment rate was stronger than predicted. In mid-1998, the Organization for Economic Co-operation and Development (OECD) had forecasted that on an annual average basis, the unemployment rate would be 8.3% in 1999 when it actually turned out to be 7.6%. This larger-than-predicted drop in the unemployment rate was the result of employment growth that also exceeded predictions. On an annual average basis, employment rose by 2.8%, much faster than the 1.8% OECD forecast.

The Canadian labour market also improved relative to the United States. For the third consecutive year, job growth has been faster in Canada than in the United States. However, because of the severity of the early 1990s recession in Canada, job growth in the long term, that is since 1989, remains lower than in the United States.

Chart 2

### Busy factories leads to hiring by manufacturers.

Sources: Labour Force Survey and Monthly Survey of Manufacturing, seasonally adjusted data

Chart 3

**Employment growth in 1999 was strong enough to push up the employment rate and drive down the unemployment rate.**

Source: Labour Force Survey, seasonally adjusted data

With the recent faster pace of employment growth in Canada, the gap between the US and Canadian unemployment rates has shrunk. On average for the year, the US rate was 4.2%, 3.4 percentage points lower than the average for 1999 in Canada. When measurement differences are accounted for, the gap is closer to 2.6 percentage points, down from 3.1 in 1998.<sup>1</sup>

### What types of jobs were people getting?

Over 97% of manufacturing jobs are full-time. It is no surprise then, during a year of very strong hiring in the manufacturing sector, that growth in 1999 was concentrated in full-time jobs. However, full-time growth was widespread throughout a number of industries and was not restricted to manufacturing alone.

Over the year, the number of people working full-time increased by 511,000 or 4.4%, offset somewhat by a 3.1% drop of 84,000 part-time jobs.

The creation of full-time jobs is usually interpreted by economists as a sign of economic health. Full-time jobs tend to be more secure, have higher pay and greater benefits. The average full-time wage rate over 1999 was estimated at \$17.16, compared to \$11.44 for part-time workers. Full-time wages were up 2.6% on average from the year earlier, more than double the increase in 1998.

Manufacturer's push to hire more full-time workers also contributed to an increase in the transportation and warehousing industry. Over 1999, employment in this area increased by 50,000, a jump of 6.9%. With manufacturing shipments increasing dramatically over the year, there was greater need for people to ship the products out of the factories and to the consumer. Almost three-quarters of the growth in transportation and warehousing was in trucking. Between December 1998 and December 1999, truck transportation employment increased by almost 12%.

<sup>1</sup> For more information on the differences in how the unemployment rate is calculated in Canada and the United States, please refer to *Labour Force Update: Canada-US labour market comparison*, Autumn 1998 issue.

## Residential and non-residential construction activity spurs more construction jobs

Another blue-collar component of the economy, construction, also improved in 1999. In the first ten months of 1999, construction GDP increased by 4.7%, mostly the result of added activity in non-residential construction but also a product of an increase in housing starts. This spurred a demand for construction workers, increasing employment in this industry by 44,000 or 5.8%. This growth in 1999 builds on strength of the year before, however, because construction employment was battered during the recession of the early 1990s, the number of people working in this industry is still below the peak of the late 1980s.

## The largest industry, wholesale and retail trade, records strong growth in 1999

Not only were these blue-collar, goods-producing industries hiring in 1999, employment also rose in the service sector, most notably in trade. Between December 1998 and December 1999, because of wholesale trade job growth, overall trade employment was up 72,000 or 3.3%, second only to manufacturing.

Wholesale sales were up over the first ten months of 1999, widespread among a number of groups. Wholesalers of motor vehicles, parts and accessories and industrial and machinery suppliers made the largest sales gains. Along with the increase in wholesale sales has come a large increase in wholesale trade employment, driving up the overall trade job figure.

Chart 6

**The increase in full-time is related to the big increase in manufacturing jobs in 1999. Other industries where employment also grew strongly include trade and transportation and warehousing.**

## Employment in education up

After falling through much of 1995 and 1996, employment in education services began to pick-up again late in 1997. In 1998, employment in this industry was up 4.4% or 40,000. Building on this, education jobs rose by an addi-

tional 4.7% in 1999, an increase of 45,000. The increase in education employment was led by hiring at colleges and universities. There was no increase in jobs in primary and secondary institutions.

Chart 9

**Employment in computer system design services continues to grow.**

Source: Labour Force Survey, unadjusted December levels

**Computer systems design services leading the way in the professional, scientific and technical services sector**

Spurred by the on-going drive of Canadian businesses to upgrade their computer systems, employment in the computer systems design industry continued to surge ahead in 1999. This led to a 37,000 or 4.2% increase in the number of people working in professional, scientific and technical services.

Employment also increased in the management of companies, administrative and other support services, where there was an increase of 36,000 jobs over 1999, a jump of 7.5%. This industry, which includes telephone call centres, job placement and travel agencies grew throughout the 1990s. Compared to ten years earlier, there were 66% more people working in this part of the economy, second only to professional, scientific and technical services at 68%.

There was also job growth in 1999 in accommodation and food services, an industry that employed an additional 32,000 or 3.4% by the end of the year. Most of this increase was the result of added part-time jobs at restaurants and fast-food outlets. Accommodation and food jobs, among the lowest paid, increased 26% over the 1990s, double the average for all industries.

Chart 10

**Tumbling wheat prices accompanied by fewer farm workers in the Prairies.**

Sources: Labour Force Survey, Prices Division, seasonally adjusted data

## Agriculture drops more than any other industry in 1999

Throughout 1999, there was a steady decline in the number of people working in agriculture. The most significant drop in farm employment came in the three prairie provinces, especially Alberta. The combination of lower wheat prices and the lure of jobs in other industries likely caused this decline.

Added public sector hiring left the number of public employees up 91,000 or 3.4%. After falling for much of the 1990s, public sector employment has been climbing steadily since the middle of 1998.

## Employment gains widespread by age and sex

The fact that employment increased in so many industries has led to a rather broad-based improvement in jobs for men and women in all major age groups.

Chart 11

A recovery in oil and nickel prices has led to more jobs in forestry, fishing, mining, oil and gas.

Sources: Labour Force Survey, Prices Division, seasonally adjusted data

While wheat prices continued to tumble, a recovery in oil and nickel prices appears to have led to a recovery in employment in the non-agricultural primary sector late in the year. However, even with a 7% increase in forestry, fishing, mining, oil and gas jobs in the last four months of 1999, declines at the start of the year were sufficient to leave other primary employment down 7,000 or -2.4% over 1999.

## Growth concentrated among private sector employees

The number of employees in the private sector increased by an estimated 290,000 in 1999, the third consecutive year with gains in the range of 3.2%. Self-employment, the other part of the private sector, increased by 46,000 or 1.9% last year, one of the smallest increases of the decade.

Between December 1998 and 1999, employment among men of core age (i.e. 25 to 54 years-old) increased by 134,000, an improvement of 2.3%. This jump exceeded population growth, bringing the proportion of core-age men with a job up 1.1 percentage points to 85.8%. This marks the third year in a row that the core-age male employment rate increased.

About half of this job increase was the result of added hiring in manufacturing, an industry in which 72% of all workers are men. Over the year, core-age men also made gains in the wholesale trade and professional, scientific and technical services industries.

Because of this employment increase, the core-age male unemployment rate dropped 1.3 percentage points to end 1999 at 5.8%, half the rate of seven years previous during the depths of the recession.

## Older-workers continue to shine

The next largest increase in employment occurred among people older than 55. Between December 1998 and December 1999, the number of older workers increased 112,000, a leap of 7.9%. This is over three times the rate of increase in their population. By the end of 1999, the

older worker employment rate was 24.4%, 1.3 points higher than it was a year earlier.

Like core-age men, 1999 marks the third consecutive year of strong employment growth for people 55 and older. Over the last three years the number of older workers has increased almost 20%, faster than any other age

Chart 12

### Employment rate rises for all major demographic groups...

Source: Labour Force Survey, seasonally adjusted data

Chart 13

### ... while the unemployment rates fall.

Source: Labour Force Survey, seasonally adjusted data

group and double the rate of increase for all workers during this time.

Older men accounted for two-thirds of the overall increase in older workers. Many of the newly employed male older workers found jobs in the construction industry. Older women, meanwhile, made gains in health care and social assistance. The very large gains made by older people in the labour market in 1999 drove their unemployment rate down 2.2 percentage points to 4.3%, a rate last seen in November 1981.

Compared to the end of 1998, an additional 94,000 core-age women had a job, an increase of 1.9%. This pushed their employment rate up 0.7 points to 73.5%. While this increase in their employment rate was smaller than that of other groups, core-age women are the only group with an employment rate higher in 1999 than a decade earlier.

The drop in the employment rate of core-age women during the recession of the early 1990s was not as severe as that of other groups. As well, coming out of the recession, it began to increase sooner than for other groups. This reflects the tendency for core-age women to work in the services sector of the economy where employment was less impacted by the recession. In comparison, employment in the goods-producing sector fell sharply during the recession and took until November 1999 to return to its March 1989 pre-recession high.

Despite the fact that 86% of core-age women work in the service sector, much of their employment increase in

1999 occurred in manufacturing. However, employment gains were also made in health care and social assistance, a more traditional part of the economy for core-age women.

During 1999, as more core-age women found work, unemployment fell. By December, the unemployment rate for core-age women was a record-low 5.6%, down 0.9 percentage points from a year earlier.

## Two good years for youths

On the heels of a sharp increase of 128,000 or 6.3% in 1998, employment among young people 15 to 24 years-old continued to grow strongly in 1999, rising 87,000 or 4.0%. By the end of the year, the proportion of youths with a job had increased by more than any other group, jumping 1.7 percentage points to 55.6%. At its 1990s low, the youth employment rate was 51.1% in January 1998.

By far, the largest gain for young people was in the accommodation and food services industry. However, youth employment also rose in trade, construction and manufacturing. This growth drove the youth unemployment rate down 1.8 percentage points over the year, hitting 13.1% by December 1999<sup>2</sup>.

2 For a comprehensive study of recent trends in the youth labour market, please refer to the Autumn 1999 issue of *Labour Force Update: Youths and the Labour Market, 1998-99*.

Source: Labour Force Survey, December data seasonally adjusted

## Where were the jobs?

Over 1999, employment rose in most of the country. In absolute terms, naturally, growth was largest in Ontario, Quebec, British Columbia and Alberta, the four largest provinces. Of these, however, only Ontario, at 3.6%, grew by more than the national rate of 3%. Of the four provinces with above-average rates of growth, three were in Eastern Canada: Nova Scotia (3.1%), Prince Edward Island (6.5%) and Newfoundland (6.8%).

Employment in Ontario increased by 198,000 in 1999, the third consecutive year of strong job growth. With manufacturing shipments up 10% in October compared to a year earlier in the province, added workers were required in Ontario's many factories. By the end of the year there were 56,000 more manufacturing workers in Ontario.

Spurred by an increase in housing starts over the year, job growth in Ontario also extended into construction, up 30,000. Finally, employment was up in professional, scientific and technical services and trade. In each of these industries employment increased by about 30,000. This job growth in Ontario led to a drop in the provincial unemployment rate from 6.9% at the start of the year to 5.5% by December.

## Employment up in Toronto and Ottawa-Hull

In Ontario's two largest metropolitan areas, Toronto and Ottawa-Hull, employment grew strongly. Compared to the last quarter of 1998, there were 41,000 more people employed in Ottawa-Hull in the last quarter of 1999, an increase of 7.9%. This pushed the unemployment rate in Ottawa-Hull to 5.9% at the end of the year, down 0.9 percentage points.

In Toronto, employment continued its long-term increase, rising by 83,000 or 3.6%. Job growth in Toronto began to pick up steam in 1994 and has shown very few slowdowns since. In the last quarter of 1999, the unemployment rate was 5.6%, a drop of 1.2 percentage points from the same period a year earlier.

## Montreal drives growth in Quebec

In Canada's second-largest labour market, Quebec, employment grew well in the last four months of the year, leaving it up 2.8% or 93,000 over the year. As activity in manufacturing facilities in the province picked up, again it was hiring in factories that drove job growth. Manufacturing accounted for about one-third of the increase in

Quebec, but there were also gains in trade, accommodation and food, information culture and recreation and health care and social assistance. By the end of the year, the unemployment rate in Quebec was 8.1%, the lowest since May 1976.

Employment increased rapidly in Montreal over the year, while it fell in much of the rest of the province. Compared to the last quarter of 1998, employment in Montreal was up 84,000 or 5.2%. Because Montreal contributed so strongly to the overall growth in the province, the same industries that drove growth province-wide pushed up employment in Montreal. Over 1999, the unemployment rate in Montreal fell 2.2 percentage points to 7.3% by the last quarter of the year.

## After a slow 1998, employment growth picks-up in British Columbia

In 1998, overall employment in British Columbia was dampened by falling commodity prices that contributed to a 20% drop in employment in the natural resources sector and a reduction in manufacturing activity that some attributed to falling overseas exports in the wake of the Asian crisis. Offset by gains in the services sector, employment in British Columbia ended the year close to where it began<sup>3</sup>.

However, in the second half of 1999, there was a strong recovery in forestry, fishing, mining, oil and gas and manufacturing, leading to a turn-around in overall job growth. By December, there were 55,000 more people working in British Columbia, an increase of 2.9% over the year. As a result, the unemployment rate in British Columbia fell 0.7 percentage points to 7.8%.

While employment picked-up in British Columbia as a whole, there was little change in Vancouver. Compared to the last quarter of 1998, a year later there was only 0.5% more employment. With added participation in the labour market, the unemployment rate rose from 6.9% to 7.4%.

3 Please note that the revisions to the Labour Force Survey data had a large effect on the December to December change in 1998 in British Columbia. In *Labour Force Update: An Overview of the 1998 Labour Market*, a strong employment trend was noted for 1998. The new, revised data in this *Overview* as detailed above, shows that there was no job growth over the year in 1998. As detailed in the paper *Improvements in 2000 to the LFS*, the revised data are more stable over time and less prone to erroneous movements. This paper is available at <http://www.statcan.ca/english/concepts/method.htm>.

Chart 14

### Employment rebounds in manufacturing, forestry, fishing, mining, oil and gas and transportation in British Columbia.

Source: Labour Force Survey, seasonally adjusted data

In contrast to Vancouver, employment picked up in Victoria over 1999. Between the last quarter of 1999 and the same period a year earlier, employment growth was strong enough to push the city's unemployment rate down 2.4 percentage points to 10%.

### Alberta job growth slower than previous three years

Even though job growth was below the national average in Alberta in 1999, the 2.5% gain builds on several years of strong improvements to the labour market in that province. Compared to December 1998, there were an additional 38,000 people working in Alberta at the end of 1999, due to growth in construction, management of companies, administrative and other support services and professional, scientific and technical services. In December 1999, the unemployment rate in Alberta was 5.4%, down 0.3 percentage points from a year earlier.

Employment increased in both Calgary and Edmonton in 1999 but growth was faster in Calgary. Despite the faster job growth in Calgary, the unemployment rate drop was greater in Edmonton. Between the last quarters of 1998 and 1999, the unemployment rate fell only 0.2 percentage points to 5.5% in Calgary while labour market participation rose. In Edmonton, the unemployment rate was 5.4% at the end of 1999, down almost a full point from a year earlier.

### Growth weak in the other Prairie provinces

Although employment in Manitoba did not fall as fast as it did in some other provinces during the recession, the recovery and expansion in subsequent years was relatively subdued in the province. Only once during the 1990s was employment growth in Manitoba above 2%, back in 1997. Last year, weakness in agriculture, forestry, fishing, mining, oil and gas and certain parts of the service sector kept employment growth at only 1.2%, an increase of 6,000. Still, even with slow job growth, the unemployment rate in Manitoba remained relatively low throughout the nineties, ending the decade at 5.2%. The proportion of the population with a job, at 63.9% in December 1999, was 2.7 points above the national average.

Job growth in Saskatchewan was also limited by poor job conditions in agriculture. This, along with declines in public administration, led to weak growth of 1.3% or 6,000 new workers. However, like Manitoba, the unemployment rate remains low in Saskatchewan, down a full point over the year to 5.3%. As well, the percent of the population with a job in Saskatchewan was 63.4%, also well above the national average.

## Recovery takes root in the East

As mentioned previously, three of the four provinces with above-average rates of growth were in the Atlantic region.

Newfoundland recorded the fastest growth in employment in Canada. Compared to December 1998, employment in Newfoundland was up 6.8% or 14,000 from a year earlier. This marks the third year in a row that employment in Newfoundland has exceeded the national average. Since 1996 employment in the province has increased 15%, more than any other province and much higher than the 9% recorded nation-wide.

Even with this strong job growth in recent years, the unemployment rate in Newfoundland remains higher than any other province. Over 1999, the rate dropped dramatically, falling 4.6 percentage points to 14.1%.

Also growing well was Prince Edward Island and Nova Scotia. Employment in Prince Edward Island rose 4,000 or 6.5% over the year, pushing the unemployment rate down 2.4 points to end the year at 12.7%. In Nova Scotia, jobs increased by 3.1%, the third consecutive year of growth in the 3% range. An increase in labour market participation kept the unemployment rate close to where it started the year. Between December 1998 and December 1999, the unemployment rate in Nova Scotia fell 0.3 percentage points to 9.6%.

Finally, there was very little change in employment in New Brunswick over 1999. This, however, follows strong growth of 4.2% in 1998, a year when New Brunswick led the nation. With declining labour market participation, the unemployment rate in New Brunswick ended the year down 1.4 points at 10.2%.

# Un aperçu du marché du travail en 1999

L'Enquête sur la population active (EPA) a fait l'objet d'une révision en profondeur, pour refléter deux changements importants dans la manière de produire les données sur le marché du travail. Toutes les estimations de l'EPA ont donc été révisées, en remontant jusqu'à janvier 1976. Le présent communiqué s'appuie sur ces données révisées. Pour plus d'information sur les révisions apportées aux données, consulter *Améliorations apportées à l'EPA en 2000*, au site [http://www.statcan.ca/francais/concepts/method\\_f.htm](http://www.statcan.ca/francais/concepts/method_f.htm).

## Conjoncture économique

À l'aube du nouveau millénaire, les Canadiens espéraient que l'économie poursuivrait sur sa lancée et qu'elle continuerait de croître, afin que la décennie se termine sur une note positive. En rétrospective, 1999 n'aura pas été une année décevante pour eux.

Dans l'ensemble, 1999 a commencé comme 1998 s'est terminée. L'économie est demeurée ferme durant toute la première moitié de l'année, alors que les consommateurs et les entreprises continuaient de dépenser. Durant les trois premiers mois de l'année, les gros articles à prix élevé, comme les véhicules automobiles, ont eu la préfé-

rence des consommateurs, puis au printemps, ceux-ci se sont tournés vers les services. Pour leur part, les entreprises, dont les bénéfices ont continué d'augmenter, ont investi dans les ordinateurs et l'équipement de bureau, afin de s'assurer que leur système informatique était prêt pour le passage à l'an 2000.

Au troisième trimestre, l'économie des États-Unis a aidé à stimuler une croissance vigoureuse des exportations de produits automobiles, d'ordinateurs et de matériel de télécommunications. Parallèlement, le revenu des particuliers a continué de croître à un rythme soutenu, ce qui a eu pour effet d'accroître les dépenses de consommation des Canadiens.

Graphique 1

**Durant les trois premiers trimestres de 1999, l'économie a continué de progresser à un rythme soutenu, favorisant du même coup une croissance de l'emploi.**

Sources : Enquête sur la population active, Système de comptabilité nationale, données désaisonnalisées

## 1999 – L'année des emplois de haute technologie dans le secteur manufacturier

La demande pour des produits fabriqués au Canada, de la part des entreprises et des consommateurs du Canada et de l'étranger, a stimulé l'activité dans les usines à travers le pays. En octobre, la valeur des livraisons manufacturières canadiennes était en hausse de 8,9 % par rapport à la valeur enregistrée à la même période, en 1998.

La situation dans le secteur manufacturier a eu une forte incidence sur l'emploi en 1999. Mené par l'embauche dans le secteur de l'informatique et du matériel électronique, le nombre de travailleurs dans le secteur manufacturier a fait un bond de 127 000 (+5,9 %) en 1999. Alors que les gains en 1999 étaient également répandus parmi d'autres industries, la croissance dans les emplois manufacturiers a mené la croissance globale de l'emploi qui a été de 427 000, soit un gain de 3,0 % pour l'année, la troisième année consécutive de gains d'emplois appréciables. En décembre, 14,7 millions de personnes travaillaient au Canada, soit 61 % de la population d'âge actif.

Cette création d'emplois s'est accompagnée d'une baisse du chômage au Canada. À la fin de 1999, le nombre de personnes sans emploi à la recherche d'un travail avait, selon les estimations, diminué de 191 000, soit de près de 15 %. Cette diminution a eu pour effet d'abaisser à 6,8 % le taux de chômage en décembre, un recul de

1,3 point par rapport au taux enregistré l'année précédente. C'était également le taux le plus bas enregistré depuis avril 1976.

## Une croissance de l'emploi supérieure aux prévisions et meilleure qu'aux États-Unis

La baisse du taux de chômage a été plus forte que prévu. Au milieu de 1998, l'Organisation de coopération et de développement économiques (OCDE) avait prévu que le taux de chômage moyen annuel serait de 8,3 % en 1999 alors qu'il s'est plutôt établi à 7,6 %. Ce recul plus important que prévu du taux de chômage s'explique par la croissance de l'emploi qui a aussi dépassé les prédictions. De fait, l'emploi a progressé de 2,8 % (sur une base annuelle moyenne), ce qui est bien supérieur au taux de 1,8 % prévu par l'OCDE. Pour une deuxième année consécutive, la croissance de l'emploi au Canada a dépassé les prévisions de l'OCDE.

Le marché du travail a aussi gagné du terrain par rapport au marché américain. Pour la troisième année consécutive, la croissance de l'emploi a été plus rapide au Canada qu'elle ne l'a été aux États-Unis. Cependant, à cause de la gravité de la récession qui a frappé le Canada au début des années 90, la croissance à long terme de l'emploi, c'est-à-dire depuis 1989, demeure inférieure à celle enregistrée aux États-Unis.

Graphique 2

**L'activité manufacturière favorise un accroissement de l'embauche.**

Graphique 3

En 1999, la croissance de l'emploi a été suffisamment forte pour accroître le taux d'emploi et abaisser le taux de chômage.

Source : Enquête sur la population active, données désaisonnalisées

Grâce à l'accélération de la croissance de l'emploi au Canada au cours des dernières années, l'écart entre le taux de chômage des États-Unis et du Canada a diminué. Pour l'ensemble de 1999, le taux de chômage aux États-Unis se situait en moyenne à 4,2 %, ce qui est 3,4 points sous la moyenne pour le Canada. Cependant, lorsqu'on tient compte des différences entre les systèmes de mesure, on obtient un écart qui se rapproche davantage de 2,6 points, alors qu'il était de 3,1 points en 1998<sup>1</sup>.

### Quels types d'emploi ont été créés?

Plus de 97 % des emplois dans le secteur manufacturier sont à temps plein. Durant une année comme 1999, qui a été marquée par un accroissement très marqué de l'embauche dans le secteur manufacturier, il n'est pas étonnant de constater que, durant une année marquée par un accroissement important du nombre d'embauches dans le secteur manufacturier, les emplois créés ont été principalement à temps plein. Cependant, la croissance dans l'emploi à temps plein n'était pas restreinte à la fabrication seulement puisqu'elle était répartie parmi plusieurs industries.

Au cours de l'année, le nombre de personnes travaillant à temps plein s'est accru de 511 000 (+4,4 %); cette hausse a toutefois été quelque peu neutralisée par la perte de 84 000 (+3,1 %) emplois à temps partiel.

La création d'emplois à temps plein est habituellement interprétée par les économistes comme étant un signe de prospérité économique. Les emplois à temps plein ont tendance à être plus sûrs, à être mieux rémunérés et à procurer plus d'avantages sociaux. En 1999, le salaire horaire moyen pour les emplois à temps plein s'est établi à 17,16 \$, comparativement à 11,44 \$ pour les travailleurs à temps partiel. De plus, le salaire à temps plein a progressé en moyenne de 2,6 % au cours de la dernière année, ce qui est plus du double de la hausse enregistrée en 1998.

L'effort du secteur manufacturier pour embaucher des travailleurs à temps plein a également contribué à la croissance observée dans l'industrie du transport et de l'entreposage, en 1999. Ainsi, 50 000 emplois ont été créés dans ce secteur au cours de la dernière année, ce qui représente une hausse de 6,9 %. L'accroissement sensible des livraisons manufacturières au cours de l'année a eu pour effet d'accroître la demande de travailleurs pouvant acheminer les produits, de l'usine au consommateur. Par ailleurs, près des trois quarts de la croissance dans l'industrie du transport et de l'entreposage a été enregistrée dans le secteur du transport par camion; entre décembre 1998 et décembre 1999, l'emploi dans ce secteur a progressé de près de 12 %.

<sup>1</sup> Pour plus d'information sur les différences dans les méthodes de calcul du taux de chômage du Canada et des États-Unis, veuillez consulter *Le point sur la population active : Comparaison entre les marchés du travail du Canada et des États-Unis*, automne 1998.

## L'intensification de l'activité dans les secteurs de la construction résidentielle et non résidentielle favorise la création d'emplois

Une autre composante de l'économie axée sur le travail manuel, l'industrie de la construction, s'est améliorée en 1999. Durant les dix premiers mois de 1999, le PIB de l'industrie de la construction a progressé de 4,7 %, sous l'effet principalement d'une intensification de l'activité dans la construction non résidentielle, mais aussi dans la construction résidentielle. Cette reprise a stimulé la demande de travailleurs de la construction, de sorte que le nombre d'emplois dans ce secteur a augmenté de 44 000 (+5,8 %). Cette croissance en 1999 s'ajoute à celle enregistrée l'année précédente. Cependant, comme l'emploi dans l'industrie de la construction a souffert de la récession du début des années 90, le nombre de personnes qui y travaillent demeure inférieur au sommet atteint à la fin des années 80.

## La plus grande industrie, celle du commerce de gros et de détail, enregistre une forte croissance en 1999

En 1999, l'emploi a non seulement progressé dans les secteurs des biens qui embauchent des cols bleus, mais aussi dans les secteurs des services, et plus particulièrement dans le commerce. Grâce à la croissance de l'emploi dans le commerce de gros, le nombre d'emplois dans l'ensemble de l'industrie du commerce s'est accru de 72 000 entre décembre 1998 et décembre 1999. Il s'agit d'une hausse de 3,3 %, la deuxième en importance, après celle enregistrée dans la fabrication.

Les ventes en gros ont augmenté au cours des 10 premiers mois de 1999, hausse bien répartie entre plusieurs groupes. Les grossistes en véhicules automobiles, pièces et accessoires, ainsi que les fournisseurs de machineries industrielles, ont obtenu les hausses les plus appréciables. De plus, cette augmentation des ventes en gros s'est accompagnée d'une forte croissance de l'emploi dans le commerce de gros, ce qui a contribué à l'augmentation du nombre total d'emplois dans l'ensemble du secteur du commerce.

Graphique 6

**La croissance de l'emploi à temps plein est liée à la forte augmentation du nombre d'emplois dans la fabrication en 1999. Les autres secteurs d'activité ayant également affiché une croissance appréciable comprennent le commerce et le transport et l'entreposage.**

## Hausse de l'emploi en éducation

Après avoir diminué durant la majeure partie de 1995 et 1996, l'emploi dans les services d'enseignement a amorcé une remontée à la fin de 1997. En 1998, une hausse de 4,4 % (+40 000) a été enregistrée dans ce secteur. Poursuivant sur cette lancée, l'emploi a de nouveau progressé en

1999, cette fois-ci de 4,7 %, soit de 45 000. Cette augmentation est attribuable entièrement à l'accroissement de l'embauche dans les établissements d'enseignement collégial et universitaire, aucune croissance n'ayant été observée dans les établissements d'enseignement primaire et secondaire.

Graphique 9

**L'emploi dans les services de conception de systèmes informatiques continue d'augmenter.**

Source : Enquête sur la population active, données de décembre, non désaisonnalisées

**Les services de conception de systèmes informatiques dominent le secteur des services professionnels, scientifiques et techniques**

Grâce au souci constant des entreprises canadiennes d'améliorer leurs systèmes informatiques, l'emploi dans la conception de systèmes informatiques a poursuivi sa forte progression en 1999. Le nombre de personnes travaillant dans les services professionnels, scientifiques et techniques a ainsi augmenté de 37 000 (+4,2 %).

L'emploi a aussi fortement augmenté dans les services de gestion des entreprises, les services administratifs et autres services de soutien, où le nombre d'emplois s'est accru de 36 000, ou de 7,5 %. Cette industrie, qui inclut les centres d'appels, les agences de placement et les agences de voyage a progressé durant toute la décennie. En dix ans, le nombre de travailleurs dans ce secteur a fait un bond de 66 %, cette hausse n'étant devancée que par celle enregistrée dans les services professionnels, scientifiques et techniques (+68 %).

Il y aussi eu augmentation de l'emploi dans l'hébergement et la restauration, une industrie où l'on a enregistré une augmentation de 32 000 emplois (+3,4 %) au cours de l'année. Cette croissance est attribuable principalement à la création d'emplois à temps partiel dans le secteur de la restauration et de la restauration rapide. Au cours de la décennie, les emplois dans le secteur de l'hébergement et de la restauration, qui comptent parmi les moins bien rémunérés, ont augmenté de 26 %, ce qui est deux fois supérieur à la moyenne pour l'ensemble des industries.

Graphique 10

**La dégringolade du prix du blé entraîne une baisse du nombre de travailleurs agricoles dans les Prairies.**

Sources : Enquête sur la population active, Divisions des prix, données désaisonnalisées

## L'agriculture, l'industrie la plus lourdement touchée en 1999

Le nombre de travailleurs en agriculture n'a cessé de diminuer en 1999. La baisse la plus appréciable a été enregistrée dans les trois provinces des Prairies, et plus particulièrement en Alberta. Ce recul de l'emploi est sans doute attribuable à l'effet combiné de la baisse constante du prix du blé et de l'attrait exercé par des emplois dans d'autres industries.

Une hausse des embauches dans le secteur public a fait progresser le nombre d'employés de ce secteur de 91 000 emplois, soit 3,4%. Après avoir décliné pendant la majeure partie de la décennie, l'emploi dans le secteur public s'accroît de façon régulière depuis le milieu de 1998.

Graphique 11

**La remontée des cours du pétrole et du nickel favorise la création d'emplois dans la foresterie, la pêche, les mines et l'extraction de pétrole et de gaz.**

Sources : Enquête sur la population active, Divisions des prix, données désaisonnalisées

Alors que s'est poursuivie la chute du prix du blé, la remontée des cours du pétrole et du nickel semble avoir favorisé une reprise de l'emploi dans les secteurs primaires non agricoles, vers la fin de 1999. Toutefois, même cette hausse de 7 % de l'emploi dans la branche de la foresterie, de la pêche, des mines et de l'extraction de pétrole et de gaz au cours des quatre derniers mois de 1999 n'a pas suffi à neutraliser les baisses enregistrées en début d'année; l'année 1999 se solde donc par la perte de 7 000 emplois (-2,4 %) dans les autres branches du secteur primaire.

## Croissance concentrée chez les employés du secteur privé.

Le nombre d'employés dans le secteur privé a connu une hausse estimée à 290 000 en 1999, la troisième année consécutive où les gains se situent autour de 3,2%. L'autre composante du secteur privé, le travail indépendant, a augmenté de 46 000 (+1,9 %) l'an dernier, l'une des plus faibles augmentations de la décennie.

## L'emploi progresse chez les hommes et les femmes et dans différents groupes d'âge

Le fait que la croissance de l'emploi ait touché un si grand nombre d'industries a favorisé une amélioration assez généralisée de l'emploi chez les hommes et les femmes, dans tous les principaux groupes d'âge.

Entre décembre 1998 et décembre 1999, le nombre d'emplois chez les hommes du groupe d'âge principal (les 25 à 54 ans) a augmenté de 134 000, soit de 2,3 %. Ce taux de croissance est par ailleurs supérieur à la croissance démographique dans ce groupe, de sorte que la proportion d'hommes du groupe d'âge principal ayant un emploi a augmenté de 1,1 point, pour s'établir à 85,8 %. Il s'agit, pour les hommes du groupe d'âge principal, d'une troisième hausse annuelle consécutive du taux d'emploi.

Environ la moitié de cette création d'emplois est le résultat de l'embauche d'un nombre accru de travailleurs dans le secteur manufacturier, un secteur dont 72 % de la main-d'œuvre est masculine. Au cours de l'année, les hommes du groupe d'âge principal ont aussi gagné du

terrain dans les secteurs du commerce de gros et celui des services professionnels, scientifiques et techniques.

Grâce à cette hausse de l'emploi, le taux de chômage chez les hommes du groupe d'âge principal a diminué de 1,3 point, pour terminer l'année 1999 à 5,8 %, soit la moitié du taux enregistré il y a sept ans, au plus fort de la récession.

## La situation demeure favorable pour les travailleurs plus âgés

C'est le groupe des travailleurs âgés de 55 ans et plus qui a profité de la seconde plus forte hausse de l'emploi. Entre décembre 1998 et décembre 1999, le nombre de travailleurs plus âgés s'est accru de 112 000, ce qui représente un bond de 7,9 % et une augmentation de plus de

Graphique 12

### L'emploi progresse dans tous les principaux groupes démographiques...

Source : Enquête sur la population active, données désaisonnalisées

Graphique 13

### ... tandis que les taux de chômage diminuent.

Source : Enquête sur la population active, données désaisonnalisées

trois fois supérieure à l'accroissement de la population de ce groupe. À la fin de 1999, le taux d'emploi parmi les travailleurs plus âgés s'établissait à 24,4 %, en hausse de 1,3 point par rapport à l'année précédente.

Tout comme les hommes du groupe d'âge principal, les travailleurs plus âgés ont connu une troisième année consécutive caractérisée par une forte hausse de l'emploi. Au cours des trois dernières années, le nombre de travailleurs plus âgés s'est accru de près de 20 %, ce qui représente la plus forte hausse de tous les groupes d'âge et le double du taux de croissance enregistré pour l'ensemble des travailleurs durant la même période.

Les deux tiers des nouveaux emplois chez les travailleurs âgés sont allés à des hommes, dont un grand nombre d'entre eux ont trouvé un emploi dans la construction. Pour leur part, les femmes plus âgées ont fait des gains dans le secteur des soins de santé et de l'assistance sociale. Les augmentations très appréciables constatées en 1999 par les personnes plus âgées sur le marché du travail ont fait reculer leur taux de chômage de 2,2 points; celui-ci est ainsi tombé à 4,3 %, un taux qu'on n'avait pas vu depuis novembre 1981.

Entre décembre 1998 et décembre 1999, le nombre de femmes du groupe d'âge principal ayant un emploi s'est accru de 94 000, soit de 1,9 %. Cette croissance a eu pour effet de relever de 0,7 point le taux d'emploi dans ce groupe, qui est passé à 73,5 %. Bien que cette hausse du taux d'emploi soit inférieure à celle enregistrée dans d'autres groupes, les femmes du groupe d'âge principal sont le seul groupe dont le taux d'emploi en 1999 a été supérieur à celui enregistré il y a dix ans.

Ceci s'explique par le fait que la baisse du taux d'emploi, durant la récession du début des années 90, n'a pas été aussi forte chez les femmes du groupe d'âge principal que dans les autres groupes. De plus, la remontée du taux d'emploi après la récession a été plus rapide chez les femmes du groupe d'âge principal que dans les autres groupes. Ces résultats reflètent la tendance des femmes de ce groupe d'âge à travailler dans le secteur des services, là où l'emploi a été moins touché par la récession. À l'inverse, l'emploi dans le secteur des biens a fortement diminué durant la récession et il a fallu attendre novembre 1999 avant qu'il ne rejoigne le sommet d'avant la récession (mars 1989).

Bien que 86 % des femmes du groupe d'âge principal travaillent dans le secteur des services, c'est le secteur manufacturier qui a été le plus créateur d'emplois en 1999. Des progressions ont toutefois été aussi réalisées dans le secteur des soins de santé et de l'assistance sociale, un domaine d'emploi plus traditionnel pour les femmes du groupe d'âge principal.

En 1999, la croissance de l'emploi a favorisé une baisse du taux de chômage chez les femmes du groupe d'âge principal. En décembre 1999, le taux de chômage dans ce groupe atteignait le niveau minimal record de 5,6 %, en baisse de 0,9 point par rapport à décembre 1998.

## Deux bonnes années pour les jeunes

Poursuivant sur la lancée amorcée en 1998, où le nombre d'emplois s'est accru de 128 000 (+6,3 %), la croissance de l'emploi chez les jeunes de 15 à 24 ans s'est poursui-

Source : Enquête sur la population active, données de décembre désaisonnalisées

vie en 1999, avec une forte hausse de 87 000, soit de 4,0 %. C'est dans le groupe des jeunes que la proportion de personnes occupées a le plus augmenté en 1999, ce taux ayant grimpé de 1,7 point pour s'établir à 55,6 %. En janvier 1998, le taux d'emploi chez les jeunes était de 51,1 %, le niveau le plus bas des années 90.

Les gains de loin les plus appréciables chez les jeunes ont été observés dans l'industrie de l'hébergement et de la restauration. Cependant, l'emploi des jeunes s'est également accru dans les secteurs du commerce, de la construction et de la fabrication. Cette croissance a fait reculer le taux de chômage chez les jeunes de 1,8 point et celui-ci a terminé l'année 1999 à 13,1 %<sup>2</sup>.

### Où y a-t-il eu gains d'emplois?

En 1999, l'emploi a augmenté dans la majeure partie du pays. En termes absolus, c'est naturellement en Ontario, au Québec, en Colombie-Britannique et en Alberta – les quatre plus grandes provinces – que les hausses ont été les plus appréciables. De ces quatre provinces, toutefois, seulement l'Ontario (+3,6 %) a enregistré un taux de croissance supérieur à 3 %, c'est-à-dire le taux de croissance pour l'ensemble du Canada. Parmi les quatre provinces ayant obtenu un taux de croissance supérieur à la moyenne, trois étaient situées dans l'Est; il s'agit de la Nouvelle-Écosse (3,1 %), de l'Île-du-Prince-Édouard (6,5 %) et de Terre-Neuve (6,8 %).

En Ontario, le nombre d'emplois s'est accru de 198 000 en 1999; il s'agit pour cette province d'une troisième année consécutive de forte croissance. Les livraisons manufacturières ayant augmenté de 10 % en Ontario, entre octobre 1998 et octobre 1999, un grand nombre d'usines de la province ont eu besoin de main-d'œuvre additionnelle. À la fin de l'année, le nombre de travailleurs dans la fabrication avait augmenté de 56 000, en Ontario.

Favorisée par l'augmentation des mises en chantier au cours de l'année, la croissance de l'emploi en Ontario s'est également étendue à l'industrie de la construction, où le nombre d'emplois a augmenté de 30 000. Enfin, on observe également des hausses dans les services professionnels, scientifiques et techniques et dans le secteur du commerce. Dans chacune de ces industries, l'emploi a augmenté d'environ 30 000. Cette croissance de l'emploi en Ontario a favorisé une baisse du taux de chômage dans la province, lequel est passé de 6,9 % en début d'année à 5,5 % en décembre.

2 Pour une étude complète des tendances récentes sur le marché du travail des jeunes, consulter *Le point sur la population active : les jeunes et le marché du travail, 1998-1999*, automne 1999.

### Hausse de l'emploi à Toronto et Ottawa-Hull

Dans les deux plus grandes régions métropolitaines de l'Ontario, soit Toronto et Ottawa-Hull, la croissance de l'emploi a été forte. Entre le dernier trimestre de 1998 et celui de 1999, le nombre de personnes occupées s'est accru de 41 000 à Ottawa-Hull, une hausse de 7,9 %. Cette hausse a eu pour effet d'abaisser le taux de chômage d'Ottawa-Hull, lequel a reculé de 0,9 point pour terminer l'année à 5,9 %.

À Toronto, la croissance de long terme de l'emploi s'est poursuivie, le nombre d'emplois ayant augmenté de 83 000 (+3,6 %). Dans cette région métropolitaine, la croissance de l'emploi s'est amorcée en 1994 et n'a connu depuis que très peu de ralentissements. Au dernier trimestre de 1999, le taux de chômage s'est établi à 5,6 %, en baisse de 1,2 point par rapport à la même période en 1998.

### Montréal donne le ton à la croissance au Québec

Au Québec, le deuxième plus grand marché du travail du Canada, l'emploi a enregistré une croissance appréciable durant les quatre derniers mois de 1999, portant ainsi les gains annuels à 93 000, soit une hausse de 2,8 %. Avec la reprise de l'activité manufacturière dans la province, c'est à nouveau l'embauche dans les usines qui a favorisé une hausse de l'emploi. Le secteur manufacturier est à l'origine du tiers environ des nouveaux emplois créés au Québec, mais il y a eu aussi accroissement dans les industries du commerce, de l'hébergement et de la restauration, de l'information, de la culture et des loisirs ainsi que dans celle des soins de santé et de l'assistance sociale. À la fin de l'année, le Québec enregistrait un taux de chômage de 8,1 %, soit le taux le plus bas depuis mai 1976.

Au cours de l'année, l'emploi a fortement progressé à Montréal, alors qu'il a diminué presque partout ailleurs dans la province. Entre le dernier trimestre de 1998 et celui de 1999, le nombre d'emplois à Montréal s'est accru de 84 000, en hausse de 5,2 %. Vu l'importance de Montréal dans la croissance globale de la province, les secteurs qui ont été les moteurs de la croissance dans l'ensemble de la province ont aussi été à l'origine de la croissance de l'emploi à Montréal. En 1999, le taux de chômage à Montréal a reculé de 2,2 points, pour terminer l'année à 7,3 %.

### La croissance de l'emploi reprend en Colombie-Britannique après un ralentissement en 1998

En 1998, la chute des cours des produits de base s'est répercutée sur la situation globale de l'emploi en Colombie-Britannique, où l'on a enregistré une baisse de 20 %

Graphique 14

**Reprise de l'emploi dans la fabrication, dans la foresterie, la pêche, les mines et l'extraction de pétrole et de gaz ainsi que dans le transport et l'entreposage en Colombie Britannique.**

Source : Enquête sur la population active, données désaisonnalisées

de l'emploi dans le secteur des ressources naturelles et un ralentissement de l'activité manufacturière que certains ont attribué à la réduction des exportations outre-mer provoquée par la crise en Asie. Grâce toutefois aux augmentations réalisées dans le secteur des services, l'emploi dans cette province a terminé l'année essentiellement au même niveau qu'en début d'année<sup>3</sup>.

Durant la deuxième moitié de 1999, toutefois, on a observé une forte reprise dans l'industrie de la foresterie, de la pêche, des mines et de l'extraction de pétrole et de gaz ainsi que dans le secteur manufacturier, ce qui a entraîné un revirement dans la situation globale de l'emploi. En décembre, la province comptait 55 000 travailleurs de plus, une hausse annuelle de 2,9 %. Ceci a eu pour effet d'abaisser le taux de chômage de 0,7 point, à 7,8 %.

Alors que l'emploi a augmenté à l'échelle de la province, peu de changements ont été observés à Vancouver. Ainsi, entre le dernier trimestre de 1998 et le dernier trimestre de 1999, l'emploi n'a progressé que d'un maigre

0,5 % et, avec l'augmentation du nombre de personnes actives sur le marché du travail, le taux de chômage a augmenté de 6,9 % à 7,4 %.

À l'opposé de Vancouver, la croissance de l'emploi a repris à Victoria en 1999. Entre le dernier trimestre de 1998 et le dernier trimestre de 1999, la croissance de l'emploi a été assez forte pour faire chuter le taux de chômage de 2,4 points, à 10 %.

### En Alberta, la croissance de l'emploi a été plus faible que durant les trois dernières années

Même si la croissance de l'emploi en Alberta a été inférieure à la moyenne nationale en 1999, l'accroissement de 2,5 % vient s'ajouter à plusieurs années de forte croissance dans cette province. À la fin de 1999, on comptait 38 000 personnes occupées de plus qu'en décembre 1998 dans cette province, cette hausse s'expliquant par les augmentations constatées dans les industries de la construction, de la gestion d'entreprises, des services administratifs et autres services de soutien et des services professionnels, scientifiques et techniques. En décembre 1999, le taux de chômage en Alberta s'établissait à 5,4 %, en baisse de 0,3 point par rapport à l'année précédente.

En 1999, l'emploi a progressé à Calgary et à Edmonton, mais les gains ont été supérieurs à Calgary. Malgré la croissance plus rapide de l'emploi à Calgary, c'est Edmonton qui a bénéficié de la plus forte baisse du taux de chômage. Ainsi, entre le dernier trimestre de 1998 et celui de 1999, le taux de chômage n'a reculé que de 0,2 point à Calgary, pour s'établir à 5,5 %, en raison de

3 À noter que les révisions qui ont été apportées aux données de l'Enquête sur la population active ont eu une grande incidence en 1998 sur les variations de décembre à décembre, en Colombie-Britannique. Ainsi, la publication *Le point sur la population active : Un aperçu du marché du travail en 1998* fait état d'une forte croissance de l'emploi en 1998. Les nouvelles données révisées qui figurent dans le présent *Aperçu*, et qui sont énoncées précédemment, indiquent au contraire que la croissance de l'emploi a été nulle en 1998. Comme nous l'indiquons dans le document intitulé *Améliorations apportées à l'EPA en 2000*, les données révisées sont plus stables dans le temps et moins sujettes aux mouvements erronés. Ce document est disponible au site [http://www.statcan.ca/francais/concepts/method\\_f.htm](http://www.statcan.ca/francais/concepts/method_f.htm).

l'augmentation du nombre de personnes actives. À Edmonton, par contre, le taux de chômage a terminé l'année 1999 à 5,4 %, en baisse de près d'un point par rapport à 1998.

### Faible croissance dans les autres provinces des Prairies

Même si la baisse de l'emploi durant la récession a été moins forte au Manitoba que dans certaines autres provinces, la reprise et la croissance qui ont suivi la récession ont été relativement modestes dans cette province. De fait, la croissance de l'emploi n'a dépassé le seuil des 2 % qu'une seule fois durant la décennie, soit en 1997. L'an dernier, la faiblesse dans les industries de l'agriculture, de la foresterie, de la pêche, des mines et de l'extraction de pétrole et de gaz et de certains segments du secteur des services a contribué à la faible croissance de l'emploi, qui n'a progressé que de 1,2 % (+6 000). Malgré cette faible croissance, le taux de chômage au Manitoba est demeuré relativement bas tout au long des années 90 et a terminé la décennie à 5,2 %. Par ailleurs, la proportion de la population occupée de cette province, qui était de 63,9 % en décembre 1999, était de 2,7 points supérieure à la moyenne nationale.

En Saskatchewan, la croissance de l'emploi a elle aussi été limitée par la piètre situation de l'emploi en agriculture. Cette situation, combinée aux pertes enregistrées dans l'administration publique, s'est soldée par une faible croissance de l'emploi dans cette province, où le nombre d'emplois a augmenté de 6 000 (+1,3 %). Cependant, comme au Manitoba, le taux de chômage demeure faible en Saskatchewan et a même reculé d'un point durant l'année, pour s'établir à 5,3 %. De plus, la proportion de la population ayant un emploi en Saskatchewan (63,4 %) est, elle aussi, bien supérieure à la moyenne nationale.

### Forte reprise dans l'Est

Comme nous l'avons mentionné précédemment, trois des quatre provinces qui ont enregistré un taux de croissance supérieur à la moyenne étaient situées dans la région de l'Atlantique.

C'est Terre-Neuve qui a affiché la plus forte croissance de l'emploi au Canada. Dans cette province, l'emploi a progressé de 6,8 % entre décembre 1998 et décembre 1999, une hausse de 14 000 emplois. Il s'agissait, pour Terre-Neuve, d'une troisième année consécutive de croissance supérieure à la moyenne nationale. Depuis 1996, la croissance de l'emploi dans cette province totalise 15 %, soit un taux supérieur à celui de toute autre province et également bien supérieur à la moyenne nationale (9 %).

Cependant, malgré cette forte croissance de l'emploi au cours des dernières années, le taux de chômage à Terre-Neuve demeure plus élevé que dans toute autre province. Le taux a cependant chuté en 1999, reculant de 4,6 points pour s'établir à 14,1 %.

L'Île-du-Prince-Édouard et la Nouvelle-Écosse ont elles aussi affiché de bons résultats. À l'Île-du-Prince-Édouard, le nombre d'emplois s'est accru de 4 000 (+6,5 %) au cours de l'année; ceci a eu pour effet d'abaisser le taux de chômage de 2,4 points, lequel a terminé l'année à 12,7 %. En Nouvelle-Écosse, l'emploi a progressé de 3,1 %, se maintenant au-dessus du seuil des 3 % pour une troisième année consécutive. Cependant, en raison d'une hausse de l'activité, le taux de chômage est demeuré pratiquement inchangé au cours de l'année; entre décembre 1998 et décembre 1999, le taux de chômage dans cette province a diminué de 0,3 point, pour terminer à 9,6 %.

Enfin, la situation de l'emploi a très peu changé au Nouveau-Brunswick, en 1999. Cette situation fait toutefois suite à une forte croissance de 4,2 % en 1998, année où le Nouveau-Brunswick avait dominé à l'échelle du pays. Avec la diminution de l'activité sur le marché du travail, le taux de chômage au Nouveau-Brunswick a terminé l'année à 10,2 %, en baisse de 1,4 point.

## About the Labour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of 52,000 representative households across the country. The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. It has been carried out monthly since then. The information generated by the survey has expanded considerably over the years with a major redesign of the survey content in 1976 and again in 1997, and provides a rich and detailed picture of the Canadian labour market. Details of these changes are available on request from the Labour Force Survey Sub-Division, Statistics Canada, Ottawa, K1A 0T6.

The sample used in the Labour Force Survey has been designed to represent all persons in the population 15 years of age and over residing in the provinces of Canada, with the exception of the following: persons living on Indian reserves, full-time members of the armed forces and people living in institutions (for example, inmates of penal institutions and patients in hospitals or nursing homes who have resided in the institution for more than 6 months). Monthly estimates of employment, unemployment and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

For detailed information on the LFS data collection, methodology and content see the document *Guide to the Labour Force Survey* (Catalogue no. 71-543-GIE) on the Statistics Canada web site at [www.statcan.ca](http://www.statcan.ca).

## Definitions and Explanations

The **labour force** is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

**Employed persons** are those who, during the reference week:

- a) did any work at all
- b) had a job but were not at work

A person is considered to be **full-time** if his/her usual hours at the main job are greater than 29 hours per week. When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be **part-time**.

**Unemployed persons** are those who, during the reference week:

- a) were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work;
- b) had not actively looked for work in the past four weeks but were on temporary layoff and were available for work;
- c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed are classified as **not in the labour force**.

## À propos de l'Enquête sur la population active

Les statistiques publiées ici sont fondées sur une enquête mensuelle menée auprès d'environ 52 000 ménages représentatifs d'un bout à l'autre du Canada. L'enquête sur la population active, lancée en novembre 1945, a eu lieu tous les trois mois jusqu'à novembre 1952. Depuis lors, elle a lieu tous les mois. L'information générée par l'enquête s'est considérablement accrue au cours des années grâce à un remaniement majeur de l'enquête en 1976, suivi d'un autre en 1997, et fournit une image riche et détaillée du marché du travail canadien. On peut obtenir des détails sur ces changements en s'adressant à la Sous-division de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

L'échantillon retenu aux fins de l'enquête sur la population active représente toutes les personnes de 15 ans et plus résidant dans les provinces du Canada, à l'exception des personnes vivant dans des réserves indiennes, des membres à plein temps des Forces armées et des pensionnaires d'institutions (par exemple les détenus de prison et les malades séjournant à l'hôpital ou dans une maison de repos pour plus de 6 mois). Les estimations mensuelles de l'emploi, du chômage et des inactifs se rapportent à une semaine bien précise chaque mois, soit normalement celle où tombe le quinzième jour du mois.

Des renseignements détaillés sur la collecte de données, la méthodologie et le contenu de l'EPA sont contenus dans le document *Guide de l'Enquête sur la population active* (n° 71-534-GIF au catalogue) dans le site web de Statistique Canada ([www.statcan.ca](http://www.statcan.ca)).

## Définitions et explications

La **population active** comprend les membres de la population civile hors institution âgés de 15 ans et plus qui avaient un emploi (personnes occupées) ou étaient en chômage pendant la semaine de référence.

**Les personnes occupées** sont celles qui, au cours de la semaine de référence:

- a) ont fait un travail quelconque
- b) avaient un emploi mais n'étaient pas au travail

Une personne est considérée à **temps plein** si elle travaille habituellement plus de 29 heures par semaine à son emploi principal. Une personne est considérée à **temps partiel** si elle travaille habituellement moins de 30 heures par semaine à son emploi principal.

**Les chômeurs** sont les personnes qui, au cours de la semaine de référence:

- a) étaient sans emploi, avaient activement cherché du travail au cours des quatre dernières semaines (y compris la semaine de référence) et étaient prêtes à travailler;
- b) n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais étaient temporairement mises à pied et étaient prêtes à travailler;
- c) n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais devaient commencer un nouvel emploi dans quatre semaines ou moins à compter de la semaine de référence, et étaient prêtes à travailler.

La partie de la population civile hors institution âgée de 15 ans et plus qui était ni occupée ni en chômage pendant la semaine de référence est classée comme **inactive**.

The **unemployment rate** represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

The **participation rate** represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, etc.) is the labour force in that group expressed as a percentage of the population for that group.

The **employment rate (formerly the employment/population ratio)** represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, etc.) is the number employed in that group expressed as a percentage of the population for that group.

The **part-time rate** represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

### Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. The seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

### Sampling Error

Estimates in this publication are based on the Labour Force Survey, a monthly survey of 52,000 households across Canada. Because they are based on a sample survey, the estimates are subject to sampling error. Changes in the level of any estimates between two months can be the result of a true change or sampling variability. In most tables in this publication an indicator of the sampling error is provided. Two thirds of the time, a change greater than the sampling error indicates a real change. Movements in estimates that are smaller than the sampling error are less likely to reflect a real change and more likely to be due to sampling variability. While the above is true for monthly movements, one can have more confidence in a series of consecutive movements in the same direction, even though some of the monthly movements may be smaller than the sampling error.

For comprehensive information on Labour Force Survey methodology, see the publication *Methodology of the Canadian Labour Force Survey*, catalogue no. 71-526-XPB.

Le **taux de chômage** représente le nombre de chômeurs exprimé en pourcentage de la population active. Le taux de chômage d'un groupe particulier (âge, sexe, etc.) est le nombre de chômeurs dans ce groupe, exprimé en pourcentage de la population active dans le même groupe.

Le **taux d'activité** représente la population active exprimée en pourcentage de la population de 15 ans et plus. Le taux d'activité d'un groupe particulier (âge, sexe, etc.) est la population active dans ce groupe exprimée en pourcentage de la population dans le même groupe.

Le **taux d'emploi (antérieurement nommé rapport emploi-population)** représente le nombre de personnes occupées exprimé en pourcentage de la population de 15 ans et plus. Le taux d'emploi d'un groupe particulier (âge, sexe, etc.) est le nombre de personnes occupées dans ce groupe, exprimé en pourcentage de la population dans le même groupe.

Le **taux de temps partiel** représente le nombre de personnes occupées à temps partiel exprimé en pourcentage du nombre de personnes occupées. Le taux de temps partiel d'un groupe particulier (âge, sexe, etc.) est le nombre de personnes occupées à temps partiel dans ce groupe, exprimé en pourcentage du nombre de personnes occupées dans le même groupe.

### Désaisonnalisation

Les fluctuations des séries chronologiques économiques sont causées par des mouvements saisonniers, cycliques et irréguliers. Une série désaisonnalisée est une série dont on a éliminé les effets des mouvements saisonniers. Ces derniers sont causés par des événements annuels réguliers comme les changements de température, les vacances, les cycles agricoles, de productions et de ventes au détail durant la période de Noël et de Pâques. La série désaisonnalisée contient à la fois des fluctuations irrégulières et des fluctuations cycliques à long terme.

Les données désaisonnalisées sont révisées chaque année afin de tenir compte des données courantes et produire des coefficients d'extrapolation prospective pour les 12 prochains mois. Les données d'extrapolation prospective seront l'objet de légères révisions dans les éditions ultérieures de la présente publication.

### Erreur d'échantillonnage

Les estimations contenues dans cette publication sont basées sur l'Enquête sur la population active, une enquête mensuelle de 52 000 ménages à travers le Canada. Étant donné qu'elles reposent sur une enquête par échantillon, ces estimations sont sujettes à des erreurs d'échantillonnage. Le changement dans le niveau d'une estimation entre deux mois peut donc être le résultat d'un changement réel ou d'une variation d'échantillonnage. Un indicateur de l'erreur d'échantillonnage est inclus dans la plupart des tableaux de cette publication. Deux fois sur trois, un changement plus grand que l'erreur d'échantillonnage indique un changement réel. Des variations moins élevées que l'erreur d'échantillonnage sont moins susceptibles de montrer des changements réels que des variations dues à l'échantillonnage. On peut avoir davantage confiance dans un ensemble de mouvements consécutifs dans la même direction, même si certains de ces mouvements sont plus petits que l'erreur d'échantillonnage.

Pour des renseignements plus complets sur la méthodologie de l'Enquête sur la Population Active, voir la publication *Méthodologie de l'enquête sur la population active*, n° 71-526-XPB au catalogue.

# Treat data like dollars!

# Les données, c'est de l'argent!

## Invest in *Canadian Economic Observer* and get immediate returns and long-term benefits!

Accurate data and insightful analysis are the hallmarks of sound decisions and successful business practices. They are also hallmarks of *Canadian Economic Observer (CEO)*.

### Value for Money — Every Month

Each month you will receive *CEO*'s two-part briefing package on the economy.

**Part One** is in an easy-to-read magazine format filled with data and analysis, supported by tables and charts. Every issue contains:

- ▶ a summary table of current economic conditions
- ▶ concise sector-by-sector analysis of economic indicators
- ▶ developments in provincial as well as international economies
- ▶ highlights of economic events at home and abroad
- ▶ one or more feature articles spotlighting major issues or industry sectors

**Part Two** is a separate companion volume — *The Statistical Summary*:

- ▶ hard numbers in tabular form on markets, prices, industrial sectors, trade competitiveness and much more
- ▶ more than 1,100 economic indicators
- ▶ monthly data for the calendar year in review
- ▶ user-friendly tables and graphs

### Satisfaction Guaranteed!

- ▶ As a subscriber, you'll be connected to Statistics Canada's economic analysts — answers to your questions related to either data or feature articles contained in *CEO* are just a phone call away.
- ▶ Discounts for multi-year subscribers — and as a bonus for subscribing, we'll give you a copy of *CEO*'s annual *Historical Statistical Summary*.
- ▶ Subscribing to *CEO* is a risk-free investment! At any time and for any reason, you may cancel your subscription and receive a refund on all undelivered copies...no questions asked.

### Start your subscription today!

Prove to yourself that an investment in data will pay off handsomely. Subscribe to the *Canadian Economic Observer* (Catalogue No. 11-010-XPB) TODAY for only \$227 in Canada (plus either GST and applicable PST or HST) and US\$227 in other countries. **CALL TOLL-FREE** 1 800 267-6677 or **FAX** 1 877 287-4369. You can also **MAIL** your order to: Statistics Canada, Circulation Management, Dissemination Division, 120 Parkdale Ave., Ottawa, Ontario, K1A 0T6 Canada or contact your local Statistics Canada Regional Reference Centre listed within this publication.

## Investissez dans *L'Observateur économique canadien* et profitez de retombées immédiates et d'avantages à long terme!

Des données exactes et des analyses perspicaces font la force de bonnes décisions et de pratiques d'entreprise fructueuses. Elles font aussi la force de *L'Observateur économique canadien (L'OÉC)*.

### De l'argent bien placé — tous les mois

Chaque mois, vous recevrez la trousse d'information à deux volets sur l'économie de l'OÉC.

La **première partie** est un magazine facile à lire, rempli de données et d'analyses appuyées de tableaux et graphiques. Chaque numéro renferme :

- ▶ un tableau sommaire de la conjoncture économique
- ▶ une analyse concise par secteur des indicateurs économiques

- ▶ les développements intervenus dans les économies provinciales et internationales
- ▶ les faits saillants d'événements économiques observés au pays et à l'étranger
- ▶ au moins un article vedette sur de grandes questions ou des secteurs de l'industrie

La **deuxième partie** est une publication d'accompagnement distincte intitulée *Aperçu statistique* :

- ▶ des chiffres sous forme de tableaux sur les marchés, les prix, les secteurs industriels, la compétitivité dans le monde des affaires et bien plus encore
- ▶ plus de 1 100 indicateurs économiques
- ▶ des données mensuelles pour l'année civile à l'étude
- ▶ des tableaux et graphiques faciles à utiliser

### Satisfaction garantie!

- ▶ En tant qu'abonné, vous serez en contact avec les analystes économiques de Statistique Canada. Pour obtenir des réponses à n'importe quelle de vos questions sur les données ou les articles vedettes de *L'OÉC*, vous n'avez qu'à nous appeler.
- ▶ Des réductions sont offertes sur les abonnements pluriannuels et, comme prime à l'abonnement, vous recevrez gratuitement un exemplaire de l'annuel *Supplément statistique historique* de l'OÉC.
- ▶ S'abonner à *L'OÉC* est un placement sans risque! En tout temps et pour quelle que raison que ce soit, vous pouvez annuler votre abonnement et vous faire rembourser pour tous les numéros qui ne vous ont pas été livrés... sans question.

### Commencez votre abonnement dès aujourd'hui!

Vous verrez qu'un investissement dans les données, ça rapporte gros.

Abonnez-vous à *L'Observateur économique canadien* (n° 11-010-XPB au catalogue) AUJOURD'HUI pour seulement 227 \$ au Canada (plus soit la TPS et la TVP applicable, soit la TVH) et 227 \$US dans les autres pays. **APPELEZ SANS FRAIS** au 1 800 267-6677. meets your need for accurate, timely and comprehensive information.

The bottom line? You get vital data and analysis on the workplace and related issues facing contemporary Canada!

### **Your springboard to success**

Each analytical article in this quarterly journal has clear charts, tables and summaries.

**Perspectives** reveals the latest labour and demographic statistics – essential to

- ▶ determine how attitudes toward retirement influence investment decisions
- ▶ evaluate the effect of wage trends on union bargaining
- ▶ forecast the effect of employment on the demand for goods and services or social programs
- ▶ compare your organization within your industry
- ▶ develop labour market studies
- ▶ ... and much more!

# L'emploi et le revenu en perspective

## Un outil essentiel pour les décideurs

**D**e nos jours, on attache beaucoup d'importance à

l'information en milieu de travail.

La revue **L'emploi et le revenu en perspective** répond à vos besoins pour des renseignements qui sont à la fois précis, actuels et complets. Vous disposerez alors de données essentielles et d'analyses sur le milieu du travail et sur d'autres défis auxquels le Canada est confronté!

### **Le tremplin à votre succès**

Les articles analytiques de cette revue trimestrielle comportent des graphiques, des tableaux et des sommaires conçus de façon à présenter clairement les statistiques sur le

marché du travail et les statistiques démographiques qui sont essentielles pour :

- ▶ déterminer dans quelle mesure les attitudes à l'égard de la retraite influent sur les décisions en matière de placements
- ▶ évaluer l'effet des tendances salariales sur les négociations syndicales
- ▶ faire des prévisions relatives à l'incidence de l'emploi sur la demande de biens et de services ou sur les programmes sociaux
- ▶ comparer votre organisation à votre branche d'activité dans son ensemble
- ▶ effectuer des études sur le marché du travail
- ▶ ... et bien plus encore!

## Discover labour market trends in seconds

When you need a snapshot of the labour market

...when you need quick answers or in-depth analysis

...when you need to see historical movements

...when you need labour-related data for a presentation or report

...you'll find that the *Labour Force Historical Review on CD-ROM* is the perfect solution.

This easy-to-use CD-ROM, issued annually, provides:

**Accurate, timely data...**

- actual and seasonally adjusted, monthly and annual data

**...plus historical information...**

- over 20 years of data (from 1976 to 1999)

**...in a tremendously useful format!**

- with thousands of cross-classified data series
- and the functionality for easy export of the data into any spreadsheet package for data manipulation

**At the click of a mouse, access key variables, such as:**

- employment and unemployment levels and rates
- demographic characteristics including age, sex, educational attainment and family variables
- national, provincial, metropolitan areas and economic regions
- industry, occupation, wages, union membership, job tenure
- workplace size and hours worked ...and much more.

## Découvrez les tendances du marché du travail en quelques secondes

Que vous ayez besoin d'un instantané du marché du travail

... de réponses rapides ou d'analyses approfondies

... de séries chronologiques

... ou de données sur le marché du travail pour un exposé ou un compte rendu

... le *CD-ROM de la Revue chronologique de la population active* est l'outil parfait.

Ce CD-ROM facile à utiliser, qui paraît chaque année, vous offre :

**des données exactes et à jour...**

- brutes et désaisonnalisées, mensuelles et annuelles

**... et des renseignements chronologiques...**

- portant sur plus de 20 ans de données (de 1976 à 1999)

**... présentés dans un format des plus pratiques!**

- avec des milliers de séries croisées
- les fonctionnalités permettant d'exporter facilement les données vers tout tableur à des fins de manipulation

**Il suffit d'un clic de souris pour accéder à des variables clés :**

- les niveaux et les taux d'emploi et de chômage
- les caractéristiques démographiques, dont l'âge, le sexe, le niveau d'instruction et les données familiales
- les données nationales, provinciales et relatives aux régions métropolitaines et économiques
- les données relatives aux branches d'activité, aux professions, aux salaires, à l'affiliation syndicale et à l'ancienneté d'emploi
- les données sur la taille du lieu de travail, le nombre d'heures de travail... et beaucoup plus.
